PLANT SCIENCE

Subject index

Volume 92 (1993)

Abscisic acid, zygotic ontogenesis, somatic ontogenesis, IAA, water parameters, *Hevea brasiliensis*, 111
Active oxygen, rice, blast disease, resistance, temperature, 27
Aging, somatic embryogenesis, *Picea abies*, needle, maturation, conversion, 213
Antioxidants, free radicals, lipids, *Triticum durum*, water status, water stress cycles, 151
Arachis hypogaea, lectin, glycoproteins, ELISA, 221
Auxin sensitivty, vandate sensitive H^+-ATPase, membrane heterogeneity, polypeptide pattern, vesicle sidedness, *Nicotiana tabacum*, 129
Auxin, 2,4-dichlorophenoxyacetic acid, cell elongation, pea, phospholipids, 19

Blast disease, rice, resistance, temperature, active oxygen, 27
Brassica, 5S rDNA, tandem repeat, methylation, 47

Ca^{2+}, diacylglycerol, phospholipase A_2, potato tuber, protein kinase, signal transduction, 183
Ca^{2+}-ATPase, calmodulin, marker enzymes, tonoplast, endoplasmic reticulum, root, *Zea mays L.*, 143
Calmodulin, Ca^{2+}-ATPase, marker enzymes, tonoplast, endoplasmic reticulum, root, *Zea mays L.*, 143
Cambial area, [^{14}C]taxol, xylem, phloem, cancer, *Taxus* spp, 1
Cancer, [^{14}C]taxol, xylem, phloem, cambial area, *Taxus* spp, 1
CDNAs, cytoplasmic low molecular weight heat shock proteins, heat shock response, *Triticum aestivum*, 35
Cell elongation, auxin, 2,4-dichlorophenoxyacetic acid, pea, phospholipids, 19
Cellulase gene, DNA methylation, ripening, polygalacturonase gene, epigenetic control, 13
Chalcone synthase, hydrolase (antifungal), polymerase chain reaction (PCR), pathogenesis-related protein, extensin, hypersensitive response, 69
Chromosome, polyamines, osmotic stress, salt stress, *Triticum aestivum* L., wheat, 203
Circadian rhythm, cyanobacteria, light, phytochrome, *Synechococcus*, 179
Conversion, embryo morphology, histology, 2,4-dichlorophenoxyacetic acid, root and shoot apices, 81
Conversion, somatic embryogenesis, *Picea abies*, needle, maturation, aging, 213
Cyanobacteria, circadian rhythm, light, phytochrome, *Synechococcus*, 179
Cytoplasmic low molecular weight heat shock proteins, cDNAs, heat shock response, *Triticum aestivum*, 35
Diacylglycerol, Ca^{2+}, phospholipase A_2, potato tuber, protein kinase, signal transduction, 183
2,4-Dichlorophenoxyacetic acid, auxin, cell elongation, pea, phospholipids, 19
2,4-Dichlorophenoxyacetic acid, embryo morphology, histology, conversion, root and shoot apices, 81

Differential scanning calorimetry, *Euglena gracilis*, electron transport, temperature, thylakoid structure and function, photosynthesis, 121
DNA methylation, ripening, polygalacturonase gene, cellulase gene, epigenetic control, 13

Electron transport, *Euglena gracilis*, differential scanning calorimetry, temperature, thylakoid structure and function, photosynthesis, 121
ELISA, *Arachis hypogaea*, lectin, glycoproteins, 221
Embryo morphology, histology, conversion, 2,4-dichlorophenoxyacetic acid, root and shoot apices, 81
Endoplasmic reticulum, Ca^{2+}-ATPase, calmodulin, marker enzymes, tonoplast, root, *Zea mays L.*, 143
Epigenetic control, DNA methylation, ripening, polygalacturonase gene, cellulase gene, 13
Euglena gracilis, differential scanning calorimetry, electron transport, temperature, thylakoid structure and function, photosynthesis, 121
Extensin, hydrolase (antifungal), polymerase chain reaction (PCR), pathogenesis-related protein, hypersensitive response, chalcone synthase, 69

Flower development, plasma membrane H^+-ATPase, *Pisum sativum*, 57
Free radicals, antioxidants, lipids, *Triticum durum*, water status, water stress cycles, 151

Genetic engineering, glycinin, modified storage proteins, soybean, transgenic plants, 191
Glycinin, genetic engineering, modified storage proteins, soybean, transgenic plants, 191
Glycoproteins, *Arachis hypogaea*, lectin, ELISA, 221

Heat shock response, cDNAs, cytoplasmic low molecular weight heat shock proteins, *Triticum aestivum*, 35
Hevea brasiliensis, zygotic ontogenesis, somatic ontogenesis, IAA, abscisic acid, water parameters, 111
Histology, embryo morphology, conversion, 2,4-dichlorophenoxyacetic acid, root and shoot apices, 81
Hordeum vulgare, *Triticum aestivum*, phospholipid transfer protein, phosphorylation, 159
Hordeum vulgare, thionins, plant pathogens, *Triticum aestivum*, 169
Hydrolase (antifungal), polymerase chain reaction (PCR), pathogenesis-related protein, extensin, hypersensitive response, chalcone synthase, 69
Hyoscyamus muticus, protoplast fusion, somatic hybrid, intergeneric *Atropa belladonns*, 91
Hypersensitive response, hydrolicase (antifungal), polymerase chain reaction (PCR), pathogenesis-related protein, extensin, chalcone synthase, 69

IAA, zygotic ontogenesis, somatic ontogenesis, abscisic acid, water parameters, *Hevea brasiliensis*, 111
Intergeneric *Atropa belladonns*, protoplast fusion, somatic hybrid, *Hyoscyamus muticus*, 91

Lectin, *Arachis hypogaea*, glycoproteins, ELIS11A, 221
Light, circadian rhythm, cyanobacteria, phytochrome, *Synechococcus*, 179
Lipids, antioxidants, free radicals, *Triticum durum*, water status, water stress cycles, 151

Marker enzymes, Ca^{2+}-ATPase, calmodulin, tonoplast, endoplasmic reticulum, root, *Zea mays L.*, 143
Maturation, somatic embryogenesis, *Picea abies*, needle, conversion, aging, 213
Membrane heterogeneity, vandate sensitive H^+-ATPase, polypeptide pattern, vesicle sidedness, auxin sensitivty, *Nicotiana tabacum*, 129
Methylation, 5S rDNA, tandem repeat, *Brassica*, 47
Modified storage proteins, genetic engineering, glycinin, soybean, transgenic plants, 191

Needle, somatic embryogenesis, *Picea abies*, maturation, conversion, aging, 213
Nicotiana tabacum, vandate sensitive H^+-ATPase, membrane heterogeneity, polypeptide pattern, vesicle sidedness, auxin sensitivty, 129

Osmotic stress, chromosome, polyamines, salt stress, *Triticum aestivum* L., wheat, 203

Particle bombardment, self-incompatibility, S-locus glycoprotein (SLG), S-locus related glycoprotein-1 (SLR1), tobacco cell culture, protein production, 99
Pathogenesis-related protein, hydrolase (antifungal), polymerase chain reaction (PCR), extensin, hypersensitive response, chalcone synthase, 69
Pea, auxin, 2,4-dichlorophenoxyacetic acid, cell elongation, phospholipids, 19
Phloem, [^{14}C]taxol, xylem, cambial area, cancer, *Taxus* spp, 1
Phospholipase A_2, Ca^{2+}, diacylglycerol, potato tuber, protein kinase, signal transduction, 183
Phospholipid transfer protein, *Triticum aestivum*, *Hordeum vulgare*, phosphorylation, 159
Phospholipids, auxin, 2,4-dichlorophenoxyacetic acid, cell elongation, pea, 19
Phosphorylation, *Triticum aestivum*, *Hordeum vulgare*, phospholipid transfer protein, 159
Photosynthesis, *Euglena gracilis*, differential scanning calorimetry, electron transport, temperature, thylakoid structure and function, 121
Phytochrome, circadian rhythm, cyanobacteria, light, *Synechococcus*, 179
Picea abies, somatic embryogenesis, needle, maturation, conversion, aging, 213
Pisum sativum, flower development, plasma membrane H^+-ATPase, 57
Plant pathogens, thionins, *Triticum aestivum*, *Hordeum vulgare*, 169
Plasma membrane H^+-ATPase, flower development, *Pisum sativum*, 57
Polyamines, chromosome, osmotic stress, salt stress, *Triticum aestivum* L., wheat, 203
Polygalacturonase gene, DNA methylation, ripening, cellulase gene, epigenetic control, 13
Polymerase chain reaction (PCR), hydrolase (antifungal), pathogenesis-related protein, extensin, hypersensitive response, chalcone synthase, 69
Polypeptide pattern, vandate sensitive H^+-ATPase, membrane heterogeneity, vesicle sidedness, auxin sensitivty, *Nicotiana tabacum*, 129
Potato tuber, Ca^{2+}, diacylglycerol, phospholipase A_2, protein kinase, signal transduction, 183
Protein kinase, Ca^{2+}, diacylglycerol, phospholipase A_2, potato tuber, signal transduction, 183
Protein production, self-incompatibility, S-locus glycoprotein (SLG), S-locus related glycoprotein-1 (SLR1), tobacco cell culture, particle bombardment, 99
Protoplast fusion, somatic hybrid, intergeneric *Atropa belladonns*, *Hyoscyamus muticus*, 91

Resistance, rice, blast disease, temperature, active oxygen, 27
Rice, blast disease, resistance, temperature, active oxygen, 27
Ripening, DNA methylation, polygalacturonase gene, cellulase gene, epigenetic control, 13
Root and shoot apices, embryo morphology, histology, conversion, 2,4-dichlorophenoxyacetic acid, 81
Root, Ca^{2+}-ATPase, calmodulin, marker enzymes, tonoplast, endoplasmic reticulum, *Zea mays L.*, 143

5S rDNA, tandem repeat, *Brassica*, methylation, 47
S-locus glycoprotein (SLG), self-incompatibility, S-locus related glycoprotein-1 (SLR1), tobacco cell culture, particle bombardment, protein production, 99
S-locus related glycoprotein-1 (SLR1), self-incompatibility, S-locus glycoprotein (SLG), tobacco cell culture, particle bombardment, protein production, 99

Salt stress, chromosome, polyamines, osmotic stress, *Triticum aestivum* L., wheat, 203
Self-incompatibility, S-locus glycoprotein (SLG), S-locus related glycoprotein-1 (SLR1), tobacco cell culture, particle bombardment, protein production, 99
Signal transduction, Ca^{2+}, diacylglycerol, phospholipase A_2, potato tuber, protein kinase, 183
Somatic embryogenesis, *Picea abies*, needle, maturation, conversion, aging, 213
Somatic hybrid, protoplast fusion, intergeneric *Atropa belladonns*, *Hyoscyamus muticus*, 91
Somatic ontogenesis, zygotic ontogenesis, IAA, abscisic acid, water parameters, *Hevea brasiliensis*, 111
Soybean, genetic engineering, glycinin, modified storage proteins, transgenic plants, 191
Synechococcus, circadian rhythm, cyanobacteria, light, phytochrome, 179

Tandem repeat, 5S rDNA, *Brassica*, methylation, 47
[^{14}C]taxol, xylem, phloem, cambial area, cancer, *Taxus* spp, 1
Taxus spp, [^{14}C]taxol, xylem, phloem, cambial area, cancer, 1
Temperature, *Euglena gracilis*, differential scanning calorimetry, electron transport, thylakoid structure and function, photosynthesis, 121
Temperature, rice, blast disease, resistance, active oxygen, 27
Thionins, plant pathogens, *Triticum aestivum*, *Hordeum vulgare*, 169
Thylakoid structure and function, *Euglena gracilis*, differential scanning calorimetry, electron transport, temperature, photosynthesis, 121
Tobacco cell culture, self-incompatibility, S-locus glycoprotein (SLG), S-locus related glycoprotein-1 (SLR1), particle bombardment, protein production, 99
Tonoplast, Ca^{2+}-ATPase, calmodulin, marker enzymes, endoplasmic reticulum, root, *Zea mays L.*, 143
Transgenic plants, genetic engineering, glycinin, modified storage proteins, soybean, 191
Triticum aestivum L., chromosome, polyamines, osmotic stress, salt stress, wheat, 203
Triticum aestivum, *Hordeum vulgare*, phospholipid transfer protein, phosphorylation, 159
Triticum aestivum, cDNAs, cytoplasmic low molecular weight heat shock proteins, heat shock response, 35
Triticum aestivum, thionins, plant pathogens, *Hordeum vulgare*, 169
Triticum durum, antioxidants, free radicals, lipids, water status, water stress cycles, 151

Vandate sensitive H^+-ATPase, membrane heterogeneity, polypeptide pattern, vesicle sidedness, auxin sensitivty, *Nicotiana tabacum*, 129
Vesicle sidedness, vandate sensitive H^+-ATPase, membrane heterogeneity, polypeptide pattern, auxin sensitivty, *Nicotiana tabacum*, 129

Water parameters, zygotic ontogenesis, somatic ontogenesis, IAA, abscisic acid, *Hevea brasiliensis*, 111
Water status, antioxidants, free radicals, lipids, *Triticum durum*, water stress cycles, 151
Water stress cycles, antioxidants, free radicals, lipids, *Triticum durum*, water status, 151
Wheat, chromosome, polyamines, osmotic stress, salt stress, *Triticum aestivum* L., 203

Xylem, [^{14}C]taxol, phloem, cambial area, cancer, *Taxus* spp, 1

Zea mays L., Ca^{2+}-ATPase, calmodulin, marker enzymes, tonoplast, endoplasmic reticulum, root, 143
Zygotic ontogenesis, somatic ontogenesis, IAA, abscisic acid, water parameters, *Hevea brasiliensis*, 111
